The Behavioral and Brain Sciences

An International Journal of Current Research and Theory with Open Peer Commentary

Editor
Stevan Harnad
20 Nassau St., Suite 240
Princeton, NJ 08542

Assistant Editor
Helaine Randerson

Behavioral Biology
Jack P. Hailman/U. Wisconsin
Hubert Markl/Universität Konstanz

Biosocial Behavior
Glendon Schubert/U. Hawaii, Manoa

Cognition and Artificial Intelligence
Zenon Pylyshyn/U. Western Ontario

Cognitive Development
Annette Karmiloff-Smith/MRC, London and MPI, Nijmegen

Cognitive Neuroscience
Lynn Nadel/U. California, Irvine

Developmental Psychology
Charles J. Brainerd/University of Alberta

Evolutionary Biology
Michael T. Ghiselin/California Academy of Sciences

Experimental Analysis of Behavior
A. Charles Catania/U. Maryland, Baltimore County

History and Systems
Julian Jaynes/Princeton

Language and Cognition
Peter Wason/University College, London

Language and Language Disorders
Max Coltheart/U. London

Neurobiology
Graham Hoyle/U. Oregon

Neuropharmacology
Susan D. Iversen/Mercke Sharp and Dohme, Ltd.

Neuropsychology
Jeffrey A. Gray/Inst. Psychiatry, London

Neurophysiology
Sten Grillner/Karolinska Institutet

Paleoneurology
Stephen Jay Gould/Harvard

Philosophy
Daniel C. Dennett/Tufts

Psychobiology
Victor H. Denenberg/U. Connecticut
David S. Olton/Johns Hopkins

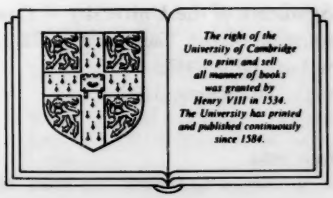
Quantitative Methods
Donald B. Rubin/U. Chicago

Vision and Artificial Intelligence
Stuart Sutherland/U. Sussex

VOLUME 7, 1984

Cambridge University Press

CAMBRIDGE • LONDON • NEW YORK
NEW ROCHELLE • MELBOURNE • SYDNEY



The right of the University of Cambridge to print and sell all manner of books was granted by Henry VIII in 1534. The University has printed and published continuously since 1584.

We would like to acknowledge the first-rate contributions of the following copyeditors to the BBS editorial process:

Barbara Westergaard (1978–1984)
Mary Laing (1978–1984)
Anne Hebenstreit (1980–1984)

Published by the Press Syndicate of the University of Cambridge
The Pitt Building, Trumpington Street, Cambridge CB2 1RP
32 East 57th Street, New York City 10022
10 Stamford Road, Oakleigh, Melbourne 3166

Printed in the United States of America by Capital City Press, Montpelier, Vermont

Contents Volume 7:1 March 1984

Weiner, R. D. Does electroconvulsive therapy cause brain damage? 1

Open Peer Commentary

Bidder, T. G. Some perspectives on electroconvulsive therapy 22
Bolwig, T. G. ECT: Wanted and unwanted effects 23
Breggin, P. R. Electroshock therapy and brain damage: The acute organic brain syndrome as treatment 24
Cherkin, A. Possible brain damage by electroconvulsive therapy: Memory impairment and cultural resistance 25
Dam, A. M. Brain damage from spontaneous but not from induced seizures in animals 26
Fink, M. ECT – verdict: Not guilty 26
Heath, R. G. An overdue comprehensive look at a maligned treatment: Electroconvulsive therapy 27
Kalinowsky, L. B. Problems in research on electroconvulsive therapy 28
Lerer, B. & Stanley M. ECT-induced memory impairment – a cholinergic mechanism? 29
Pinel, J. P. J. After forty-five years ECT is still controversial 30
Price, T. R. P. Modern ECT: Effective *and* safe 31
Sackeim, H. A. Not all seizures are created equal: The importance of ECT dose–response variables 32
Salzman, L. Electroconvulsive therapy, pharmacotherapy, and psychotherapy 33
Small, J. G. & Small, I. F. Current issues in ECT practice and research 33
Squire, L. R. Opinion and facts about ECT: Can science help? 34
Sugerman, A. A. ECT: A clinician's viewpoint 37
Swartz, C. M. The justification for electroconvulsive therapy 37
Taylor, J. R. ECT: The controversy continues 38
Templer, D. I. ECT and brain damage: How much risk is acceptable? 39
Weaver, L. A., Jr. ECT damage: Are there more pressing problems? 39
Zornetzer, S. F. ECT: Out of the shadows and into the light 41
Zubin, J. Loss of familiarity as an explanation of autobiographical memory loss 41

Author's Response

Weiner, R. D. ECT: Facts, affects, and ambiguities 42

Broadbent, D. E. The Maltese cross: A new simplistic model for memory 55

Open Peer Commentary

Callaway, E. Models of mind: Hidden plumbing 68
Carr, T. H. & Brown, T. L. The Maltese cross: Simplistic yes, new no 69
Cohen, G. Modular mind or unitary system: A duck–rabbit effect 71
Crowder, R. G. Broadbent's Maltese cross memory model: Wisdom, but not especially unconventional 72
Hirst, W. Practice and divided attention 72
Loftus, E. F., Loftus, G. R. & Hunt, E. B. Broadbent's Maltese cross memory model: Something old, something new, something borrowed, something missing 73
Mackworth, A. K. The homunculus as bureaucrat 74
Martin, M. Memory and mood 75
Morton, J. What kind of a framework? 75
Murray, D. J. The usefulness for memory theory of the word "store" 76
Rabbitt, P. Simplistic heuristics and Maltese acrostics 77
Roediger, H. L. The use of interference paradigms as a criterion for separating memory stores 78
Sayre, K. M. Information-flow diagrams as scientific models 79
Schneider, W. Practice, attention, and the processing system 80
Seamon, J. G. Pipelines, processing models, and the mind–body problem 81
Sternberg, S. Stage models of mental processing and the additive-factor method 82
Wasserman, G. S. How do representations get processed in real nerve cells? 85
Watkins, M. J. Models as toothbrushes 86

Author's Response

Broadbent, D. E. Modules in models of memory 86

Maynard Smith, J. Game theory and the evolution of behaviour 95

Open Peer Commentary

Barlow, G. W. & Rowell, T. E. The contribution of game theory to animal behavior 101
Blanchard, D. C., Blanchard, R. J. & Flannelly, K. J. Cost-benefit analysis: An emotional calculus 103
Einhorn, H. J. Random strategies and "ran-dumb" behavior 104
Fararo, T. J. Evolutionary game theory and human social structures 104
Gilbert, M. Coordination problems and the evolution of behavior 106
Herrnstein, R. J. & Vaughan, W., Jr. Evolutionary and behavioral stability 107
Johnston, T. D. Development and the origin of behavioral strategies 108
Krebs, J. R. & Kacelnik, A. Optimal learning rules 109
Lea, S. E. G. & Dow, S. M. Optimization and flexibility 110

Logue, A. W. Is it possible to be optimal? 111
Malone, J. C., Jr. Evolutionary game theory: Suddenly it's 1960! (or is it 1860?) 112
Mazur, J. E. Is matching behavior an evolutionary inevitability? 112
Rachlin, H. Learning rules and learning rules 113
Rapoport, A. Game theory without rationality 114
Selten, R. & Hammerstein, P. Gaps in Harley's argument on evolutionarily stable learning rules and in the logic of "tit for tat" 115
Staddon, J. E. R. It's all a game 116
Thaler, R. H. Asymmetric games and the endowment effect 117
Williams, G. C. When does game theory model reality? 117

Author's Response

Maynard Smith, J. Game theory without rationality 117

Lamb, M. E., Thompson, R. A., Gardner, W. P., Charnov, E. L. & Estes, D. Security of infantile attachment as assessed in the "strange situation": Its study and biological interpretation **127**

Open Peer Commentary

Brown, R. T. Ever since Hippocrates . . . 147
Chess, S. What do we learn from the Strange Situation? 148
Cicchetti, D. V. On a model for assessing the security of infantile attachment: Issues of observer reliability and validity 149
Denenberg, V. H. Stranger in a strange situation: Comments by a comparative psychologist 150
Feinman, S. Correlations in search of a theory: Interpreting the predictive validity of security of attachment 152
Freedman, D. G. Asking the right questions 153
Ghiselin, M. T. How to think about the evolution of behavioral development 153
Grossmann, K. E. & Grossmann, K. Discovery and proof in attachment research 154
Hay, D. F. The evolution of ethological attachment theory 155
Klopfer, P. H. Caveats on the use of evolutionary concepts 156
Kovach, J. K. & Kovach, M. E. Infantile attachment: The forest and the trees 157
Masters, J. C. Reification and "statification" in attachment theory and research 158
Mills, C. J. & Eiserer, L. A. Security of infantile attachment: The person–situation debate revisited 159
Petrovich, S. B. & Gewirtz, J. L. Learning in the context of evolutionary biology: In search of synthesis 160
Rajecki, D. W. On inferring evolutionary adaptation 161
Salzen, E. A. Bonding behaviours, behavioural binds, and biological bases 162

Authors' Response

Lamb, M. E., Gardner, W. P., Charnov, E. L., Thompson, R. A. & Estes, D. Studying the security of infant–adult attachment: A reprise 163

Contents Volume 7:2 June 1984

Bickerton, D. The language bioprogram hypothesis **173**

Open Peer Commentary

Bates, E. Bioprograms and the innateness hypothesis 188
Bloom, L. A bioprogram for language: Not whether but how? 190
Cartmill, M. Innate grammars and the evolutionary presumption 191
Corne, C. On the transmission of substratal features in creolisation 191
Cromer, R. F. Language acquisition: Genetically encoded instructions or a set of processing mechanisms? 192
Goodman, M. Are creole structures innate? 193
Gopnik, M. From pidgins to pigeons 194
Hornstein, N. Grades of nativism 195
Jenkins, L. Pidgins, creoles, and universal grammar 196
Keil, F. C. Of pidgins and pigeons 197
Lightfoot, D. W. The relative richness of triggers and the bioprogram 198
Marantz, A. Creolization: Special evidence for innateness? 199
Maratsos, M. How degenerate is the input to creoles and where do its biases come from? 200
Marshall, J. C. Pidgins are everywhere 201
Meier, R. P. Sign as creole 201
Mufwene, S. S. The language bioprogram hypothesis, creole studies, and linguistic theory 202
Muysken, P. Do creoles give insight into the human language faculty? 203

Posner, R. Creolization or linguistic change? 204
Roberts, P. A. Problems with similarities across creoles and the development of creole 205
Samarin, W. J. Socioprogrammed linguistics 206
Sampson, G. Do creoles prove what "ordinary" languages don't? 207
Seuren, P. A. M. The bioprogram hypothesis: Facts and fancy 208
Slobin, D. I. Child language and the bioprogram 209
Wang, W. S-Y. Organum ex machina? 210
Woolford, E. Why creoles won't reveal the properties of universal grammar 211

Author's Response
Bickerton, D. Creole is still king 212

Tulving, E. Précis of *Elements of episodic memory* 223

Open Peer Commentary
Baddeley, A. D. Neuropsychological evidence and the semantic/episodic distinction 238
d'Ydewalle, G. & Peeters, R. There is more going on in the human mind 239
Hintzman, D. L. Episodic versus semantic memory: A distinction whose time has come – and gone? 240
Hirst, W. Factual memory? 241
Jones, G. V. Analyzing recognition and recall 242
Kihlstrom, J. F. A fact is a fact is a fact 243
Klatzky, R. L. Armchair theorists have more fun 244
Lachman, R. & Naus, M. J. The episodic/semantic continuum in an evolved machine 244
Loftus, E. F. & Schooler, J. W. Recoding processes in memory 246
McCauley, R. N. Inference and temporal coding in episodic memory 246
Morton, J. & Bekerian, D. A. The episodic/semantic distinction: Something worth arguing about 247
Nilsson, L.-G. Bridging gaps between concepts through GAPS 248
Ohta, N. The source of the long-term retention of priming effects 249
Olton, D. S. Comparative analysis of episodic memory 250
Raaijmakers, J. G. W. On falsifying the synergistic ecphory model 251
Roediger, H. L., III Does current evidence from dissociation experiments favor the episodic/semantic distinction? 252
Seamon, J. G. The ontogeny of episodic and semantic memory 254
Tajika, H. Recognition and recall: The direct comparison experiment 254
Tiberghien, G. Just how does ecphory work? 254
Wolters, G. Memory: Two systems or one system with many subsystems? 256

Author's Response
Tulving, E. Relations among components and processes of memory 257

Sternberg, R. J. Toward a triarchic theory of human intelligence 269

Open Peer Commentary
Baron, J. Criteria and explanations 287
Berry, J. W. Cultural relativism comes in from the cold 288
Carroll, J. B. Some psychometric considerations 288
Detterman, D. K. Understand cognitive components before postulating metacomponents, etc., part 2 289
Economos, J. Intelligent dissension among the Archói is good for the people 290
Eysenck, H. J. Intelligence versus behaviour 290
Ford, M. E. Finding the right tools for the task: An intelligent approach to the study of intelligence 291
Humphreys, L. G. A rose is not a rose: A rival view of intelligence 292
Irvine, S. H. The contexts of triarchic theory 293
Jackson, N. E. Intellectual giftedness: A theory worth doing well 294
Jensen, A. R. Mental speed and levels of analysis 295
Olson, D. R. In what sense does intelligence underlie an intelligent performance? 296
Pellegrino, J. W. & Goldman, S. R. Context and novelty in an integrated theory of intelligence 297
Raaheim, K. How intelligent can one be? 298
Richelle, M. N. Intelligence, adaptation, and inverted selection 299
Rogoff, B. What are the interrelations among the three subtheories of Sternberg's triarchic theory of intelligence? 300
Triandis, H. C. Speed and adaptivity in intelligence 301
Tyler, L. E. Some possible implications of Sternberg's triarchic theory of intelligence 301
Vernon, P. E. Intelligence: Some neglected topics 302
Yussen, S. R. A triarchic reaction to a triarchic theory of intelligence 303
Zimmerman, B. J. Contextual and psychometric descriptions of intelligence: A fundamental conflict 303

Author's Response
Sternberg, R. J. If at first you don't believe, try "tri" again 304

Continuing Commentary

On Plotkin, H. C. & Odling-Smee, F. J. (1981) A multiple-level model of evolution and its implications for sociobiology. BBS 4(2): 225–268.

Baerends, G. P. Evolution: Monolith or strawman – a matter of proper definitions and words 317

Authors' Response
Odling-Smee, F. J. & Plotkin, H. C. Evolution: Its levels and its units 318

Contents Volume 7:3 September 1984

Ebbesson, Sven O. E. Evolution and ontogeny of neural circuits 321

Open Peer Commentary

Alberch, P. A return to the *Bauplan* 332
Braford, M. R., Jr. Parcellation: An explanation of the arrangement of apples and oranges on a severely pruned phylogenetic tree? 332
Bullock, T. H. A milestone in comparative neurology: A specific hypothesis claims rules for conservative connectivity 333
Calvin, W. H. Precision timing requirements suggest wider brain connections, not more restricted ones 334
